

Seed Cycling Chart

FOR HORMONE BALANCE + CYCLE HEALTH

WHEN

WHAT

WHY

HOW

1ST HALF OF CYCLE

Follicular Phase

PHASE 1

Day 1 of your period until ovulation (about days 1–14)

1 Tbsp ground flaxseed
+
1 Tbsp pumpkin seeds
daily

Supports rising estrogen before ovulation. Rich in lignans, omega-3s, zinc and fibre.

Stir into oatmeal or yogurt, or blend into a smoothie

2ND HALF OF CYCLE

Luteal Phase

PHASE 2

Day after ovulation until your next period (about days 15–28)

1 Tbsp sesame seeds
+
1 Tbsp sunflower seeds
daily

Supports progesterone after ovulation. Rich in vitamin E, selenium, zinc and magnesium.

Sprinkle on salads, soups or toast, or use tahini in dressings

Grind your flax

Whole flax passes through undigested. Store ground seeds in the fridge.

No period or irregular?

Follow the moon: start Phase 1 at the new moon, switch at the full moon.

Give it time

Stay consistent for about 3 cycles and notice how you feel.

Pelvic floor bonus

The extra fibre helps keep bowels regular, so there's less straining.

Seed cycling is a gentle, food-based practice. The seeds are nutritious, but research on the cycling routine itself is limited. Skip any seed you're allergic to, add fibre gradually, and talk to your healthcare provider about heavy, painful, irregular or missing periods.
