Seed Cycling Chart

FOR HORMONE BALANCE + CYCLE HEALTH

	WHEN	WHAT	WHY	HOW
1ST HALF OF CYCLE	**Follicular Phase** PHASE 1	**Day 1** of your period until ovulation (about days 1–14)	**1 Tbsp ground flaxseed** + **1 Tbsp raw pumpkin seeds** daily	Thought to support healthy estrogen levels and ovulation. Rich in lignans, zinc, magnesium and omega-3s.	Stir into oatmeal or yogurt, or blend into a smoothie
2ND HALF OF CYCLE	**Luteal Phase** PHASE 2	**Day after ovulation** until your next period (about days 15–28)	**1 Tbsp ground sesame seeds or tahini** + **1 Tbsp raw sunflower seeds** daily	Thought to support progesterone after ovulation. Rich in lignans, zinc, vitamin E and selenium.	Sprinkle on salads, soups or toast, or use tahini in dressings

Grind flax & sesame

Ground seeds are easier to digest and absorb. Keep ground seeds in the fridge.

No period or irregular?

Follow the moon: Phase 1 seeds from new moon to full moon, then switch.

Give it time

Most people need 3–6 months of steady practice. Missed days are okay.

Pelvic floor bonus

The extra fibre helps keep bowels regular. Add it slowly and drink water.

Seed cycling is a gentle, food-based practice, not a medical treatment. The seeds are nutritious, but research on the cycling routine itself is limited. Skip any seed you're allergic to. Check with your healthcare provider first if you are pregnant or breastfeeding, take hormone medication or birth control, or have a hormone-sensitive condition, and about heavy, painful, irregular or missing periods.
